

If you have been looking to conserve water or start your own compost bin...here's your chance!

FreeGarden™ EARTH

What is a compost bin?

A compost bin is a container, specifically designed and engineered for the collection and processing of organic materials into nutrient rich compost or humus. The finished compost or humus harvested from a compost bin through the composting process of decomposition is an excellent soil amendment providing much needed enrichment for your soil.

Why use a compost bin?

A compost bin is a tangible, visible tool to assist residents in self management of their kitchen and yard residuals. Using a compost bin allows for greater control over the process of composting and decomposition. A compost bin addresses neatness, attractiveness and convenience.

\$54

FEATURES

- One piece injection molded construction
- Large capacity – 10.4 cubic feet/77.8 US gallons/294.5 litres
- Convenient 12"x16" offset, front harvest door
- Twist locking lid
- Vertical and horizontal columnar ventilation
- Conical shape means nothing gets stuck in corners and also provides for ease of lifting off to access the entire pile
- Rodent resistant
- Easy, large access 20.25 inch diameter lid opening
- Made of 100% recycled materials
- 10 year warranty
- Fits in any vehicle

FreeGarden™ RAIN

What is a rain barrel?

A rain barrel is a system used by a homeowner to collect and store rainwater from the roof of a home. The water harvested is soft, fresh water that can be used for a variety of purposes, including lawn and garden watering, topping off pools, and washing cars. Water from home faucets is treated to a level allowing it to be safe to drink, while natural rain water has the pH level ideal for water and plant growth. Rain water harvesting helps to divert rain from storm drains, decrease the impact of runoff to streams, and minimize sewer overflows during heavy rainfalls.

\$65

FEATURES

- 55 gallon/208 litre rain barrel
- Insect resistant stainless steel screen
- Higher spigot accommodates most watering cans
- Easy multi-barrel installations
- As many as 3 barrels fit in the back of a regular sedan
- 3 additional spigot mounting locations
- Childproof lid and stable footprint
- Square shape ideal for flush-to-wall and corner installations
- 34" h x 24" w x 24" d
- Saves most homeowners 1,300 gallons of water each summer
- Helps restore soil to ideal pH levels
- Conserves water, protects the environment, and lowers water bills
