**Honey Crisp Apple**

*Malus ‘Honeycrisp’*

- **Plant Characteristics:** Trees have low to moderate vigor. Juicy apples carrying a delightful flavor. Popular apple for eating fresh.
- **Size:** Height: 12–14’ Semi-dwarf root stock
- **Foliage:** Forest green foliage turning yellow in fall.
- **Flower:** White flowers late spring
- **Fruit:** Large dappled apple with a well-balanced flavor, outstanding crisp and juiciness. Best for fresh eating and salads. Ripens Late September
- **Soil:** Sandy loam to clay loam.
- **USDA Hardiness Zone:** Zone 3
- **Light Range:** Full Sun
- **pH:** 6.0–7.0 pH

- **Other:**
  - Apples will easily store for 7 months or more.
  - Winter-hardy apple in USDA Zone 3
  - Sub-acid and mildly aromatic flavor.
  - A very popular apple, millions of Honeycrisp Apple trees have been sold.
  - The apples hold very well on the tree. Mature trees have a higher fruit density.
  - This apple needs another apple variety near by in order for the tree to bear fruit.
