### Plant Characteristics
- Upright and spreading tree form. High fruit quality and hardiness. The tree is moderately fire blight resistant. Distinctive sweet-tart balance with a brown sugar overtone. Light, crispy & juicy. Good baking and eating apple

### Size
- **Height:** 12’—15’
- **Width:** 14’

### Foliage
- Forest green foliage turning yellow in fall.

### Flower
- Showy clusters of lightly scented light pink - white flowers. Fragrant

### Fruit
- 3” Fruit. Color is red green with 60 - 85% red over green basis. Early season harvest from late August to early September. Storage is two months.

### Soil
- Sandy loam to clay loam

### Tolerances
- Drought tolerant

### USDA Hardiness Zone
- Zone 3

### Growth Rate
- Medium

### Light Range
- Full Sun

### pH
- 6.5—7.0 pH

### Other
- A semi-dwarfing rootstock was used which reduces the mature size and usually produces fruit in 4-5 years.
  - Don’t plant in low areas where frost settles.
  - Don’t plant where previous apple trees have been planted.
  - Do not fertilize first year. In subsequent years, none needed if annual growth is:
    - 18-24” on young trees (Note: measure between terminal bud and ring of bud scale scars)
    - 10-12” on mature trees
